

# Scott Technology Secures New Automation Project with Rio Tinto at West Angelas

*Scott's Rocklabs Enhances Safety and Efficiency with Advanced Automation at West Angelas*

**AUCKLAND, NZ [21 JAN 2025]** - Scott Technology (NZX:SCT) has secured its third automation project with Rio Tinto in Australia, this time automating the minerals laboratory at the West Angelas mine site. Led by Scott's Rocklabs business unit, the project is set to improve safety and optimise laboratory operations—ultimately driving better operational outcomes across the entire site and aligning with Rio Tinto's commitment to sustainable mining practices.

"This project builds on the strength of our decade-long partnership with Rio Tinto and reinforces Scott Technology's leadership in automation," said Mike Christman, CEO of Scott Technology. "By delivering innovative products and solutions, we're helping Rio Tinto achieve its goals of safer, more efficient, and sustainable operations, while ensuring their sites remain at the forefront of modern mining practices."

The semi-automated Rocklabs system features two Rio 350 Crushers and three ABM 3000 Pulverisers, designed to process up to 700 samples per day. This system ensures consistent, high-quality data to support smarter decision-making and optimise site performance. By reducing the need for manual handling, the system lowers the risk of human error and improves operational efficiency. Its enclosed design, combined with advanced dust extraction technology, further reduces silica exposure, reinforcing Rio Tinto's dedication to worker.

Located in the Pilbara region of Western Australia, the West Angelas mine is a vital hub for Rio Tinto's iron ore operations, contributing significantly to the company's overall output with an annual production capacity of nearly 30 million tonnes. The mine plays a key role in supporting Rio Tinto's supply chain and global iron ore demands. This latest collaboration builds on the proven success of previous automation projects at Rio Tinto's Gudai Darri and Robe Valley sites, where advanced technologies have already demonstrated their ability to enhance safety, efficiency, and sustainability in mining operations.

"This project highlights the power of automation to make mining operations safer and smarter," added Casey Jenkins, President of Minerals, Scott Technology. "By automating hands-on processes in the lab, we're improving worker safety while ensuring the delivery of more accurate, reliable data with less risk of errors. This data empowers Rio Tinto to optimise mine performance, minimise waste, and make significant strides toward its sustainability goals."

**About Scott**

Scott delivers smart automation and robotic solutions that transform industries by making businesses safer, more productive, and more efficient. Our diverse capability makes us the first choice for hundreds of the world's leading brands. With design and build operations across Australasia, China, Europe, and America and over 100 years of engineering excellence, Scott is the global expert in automation.
