About Channel Infrastructure NZ

Channel Infrastructure is New Zealand's largest fuel import terminal, storing and distributing 40% of New Zealand's transport fuel, including 80% of New Zealand's jet fuel. We receive, store, test and distribute petrol, diesel, and jet fuel that our customers import and supply to Auckland and Northland.

Fuel is imported via our deep-water harbour and jetty infrastructure at Marsden Point and stored in more than 290 million litres of contracted storage tanks on site. The fuel is then distributed via our 170-kilometre pipeline to Auckland, or by our customers (bp, Mobil, and Z Energy) via truck into Northland. We underpin the resilience of New Zealand's fuel supply chain with our tank capacity, which enables increased storage of fuel in New Zealand, and through efficient, low-emission distribution of the fuel into the Auckland market.

Our plan for growth includes exploring the manufacture of lower-carbon fuels at Marsden Point to support the energy transition in New Zealand. Given our proximity to Auckland, and critical role in the jet fuel supply chain, Channel is well positioned to facilitate the renewable fuel transition in New Zealand.

Channel Infrastructure's wholly-owned subsidiary, Independent Petroleum Laboratory Limited, provides fuel quality testing services throughout New Zealand.
